Zepto Retail Data Analysis

Florian Mata – Data Analyst

Made with GAMMA

Executive Summary

Project Goal

Analyze Zepto's e-commerce inventory dataset to simulate real-world analyst workflows.

Focus Areas

- Pricing trends
- Inventory inefficiencies
- Product strategy

Made with GAMMA

Business Objective

Pricing Trends

Identify discount patterns across the catalog

Inventory Gaps

Surface inefficiencies in stock management

Revenue Opportunities

Uncover growth potential by category

Dataset Overview

Source

Kaggle — scraped from Zepto

Structure

Product-level inventory data. Each row = unique SKU.

1

SKU ID, Category, Product Name

2

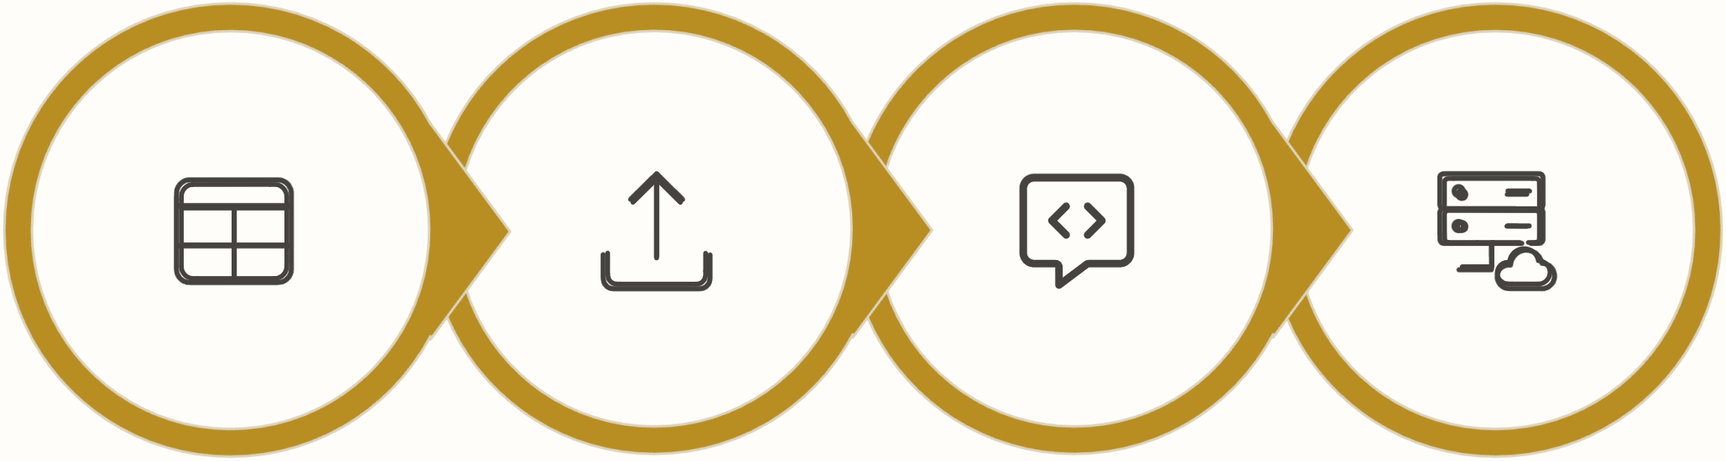
MRP, Discount %, Selling Price

3

Available Quantity, Weight, Stock Status

Made with GAMMA

Data Preparation & Cleaning



Create Table

Import CSV

Resolve Encoding

Validate Types

Invalid rows (price = 0) removed. Prices converted from paise to rupees. Formats standardized throughout.

Made with GAMMA

Exploratory Data Analysis

Records & Duplicates

Total record count and duplicate SKU detection

Category Distribution

Product spread across all categories

Stock & Nulls

Stock status analysis and null value detection

Key Insights

💰 Pricing

High discounts ≠ lowest price — discount depth doesn't always translate to best value

📦 Inventory

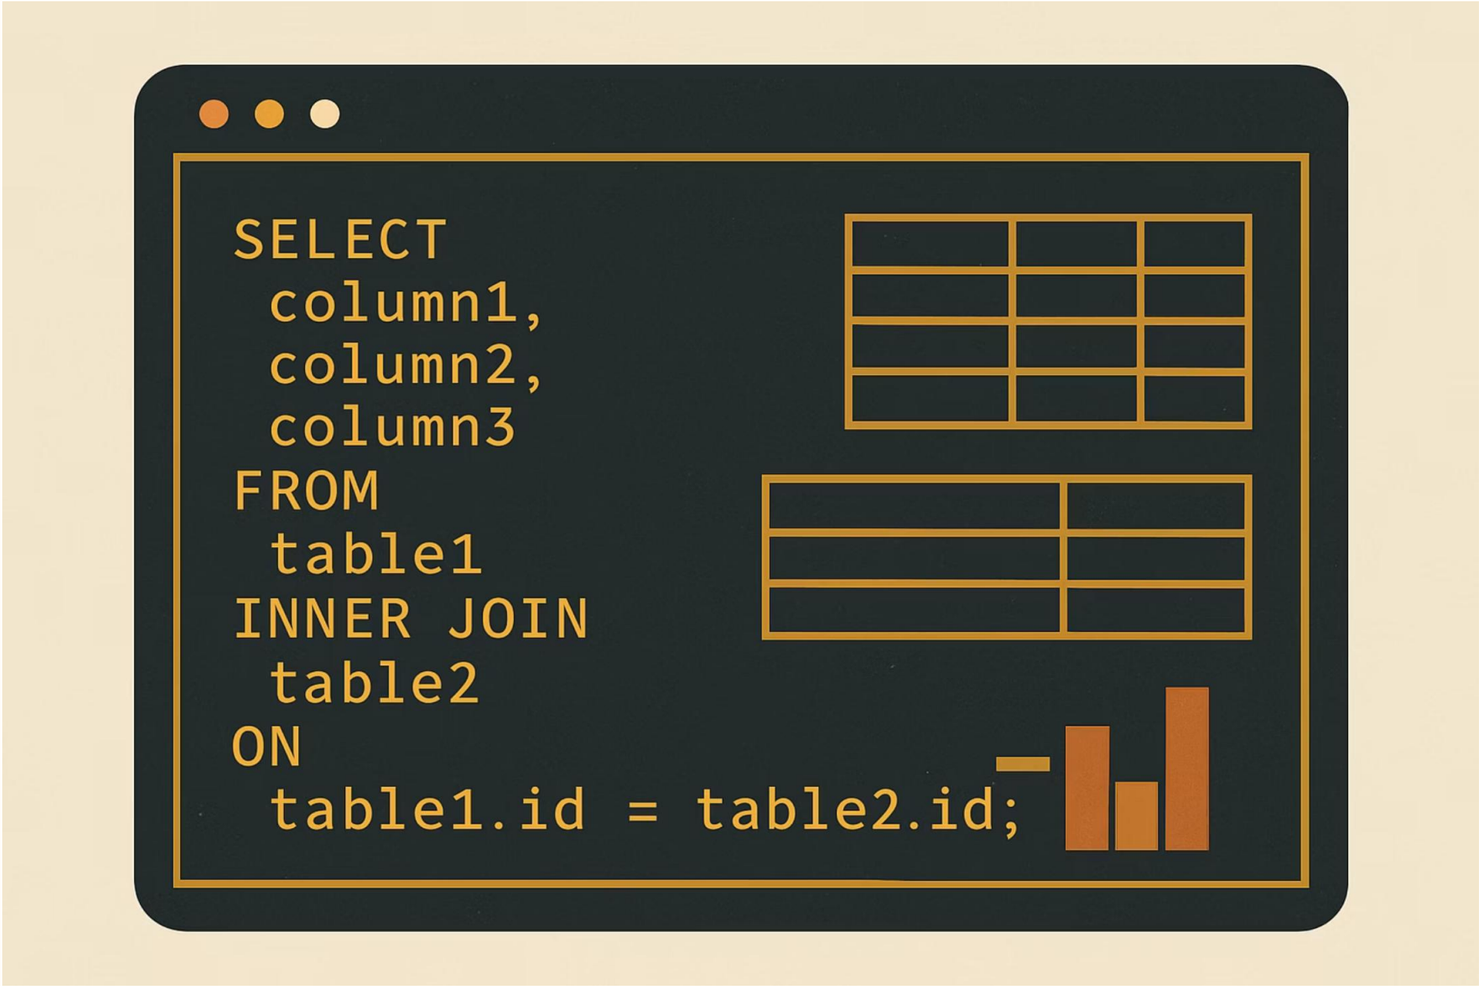
Stock varies significantly by category — uneven distribution reveals supply gaps

⚖️ Product Value

Price per gram is the key metric for identifying true value products

Made with GAMMA

Advanced Analysis



01

Top Discount Products

02

Revenue by Category

03

Price per Gram

04

Category Ranking

05

Weight Segmentation
